

TEDDY EBERSOL'S RED SOX SPORTS FIELDS

Boston, MA

In the fall of 2005, general landscape contractor Argus Construction hired Agresource to make a sports field root zone mix for multi-sport playing fields in Boston, MA.

Geller Associates designed the project and took an environmentally sustainable approach by utilizing and amending all available on-site soil to produce a quality sports field root zone.

Agresource imported high-quality Agresoil Compost™ made in Merrimack, NH, and carefully chosen sand. Together, these were used to amend the on-site soil and successfully meet specification requirements for a fast-draining and compaction-resistant sports field root zone.
