

Inter-District Environmental Magnet School

Stamford, CT

A lightweight soil was made to strict specification requirements for installation on the rooftop of the new Inter-District Environmental Magnet School located in Stamford, CT. Agresource manufactured the mix and utilized AGRESOIL COMPOST made in Fairfield, CT as a key component. The compost supplied the organic matter, nutrients, and microbial life to support thriving plant material.

The rooftop garden is shown on the right side of the rendition, pictured above, with the walkway through the center.
