

MORRISTOWN BEARD SCHOOL

Morristown, NJ

New turf grass was established in the summer of 2002 at the Morristown Beard School. During construction, a two-inch layer of Agresoil Compost™ was spread over the entire area and a rotodarien machine was used to incorporate the compost into the soil.

Northern Nurseries 06/40 Tri/Blue seed was used and the results were remarkable, particularly given the extremely dry conditions and not having irrigation. Bob Revello, the facility manager was very pleased with the results.
